

A solid night's sleep.™

Introducing the HD mattress.

A level of comfort you wouldn't expect to find in a heavy duty bed.

Just because the HD is built to last doesn't mean that comfort takes a back seat. The HD integrates an advanced support system with the finest comfort layers that mold to the shape of your body for proper spinal alignment and deep, rejuvenating sleep. And with German-engineered foam encasement technology, and a robust heavy-duty wood foundation you can rest easy knowing that the HD will perform, night after night.

Solid comfort.

Only the highest quality foams are used throughout the entire mattress. Memory Foam, Latex Foam, and High Density Foams (1.8lb or greater) consistently deliver reduced body impressions and long comfort life. Most importantly, these high quality materials reduce pressure points and cradle the body in a personalized, conforming layer for the ultimate in comfort and support.

Durable, handcrafted precision.

Each HD bed is fully outer tufted by hand, securing the upholstery layers to ensure that they will not settle or shift over time. Wool rosette button tufting ensures restful quality sleep, night after night. Handles are an added benefit that allow you to easily move or place the mattress.

Taking support to the edge.

German-designed encasement brings high-density, 1.8 lb foam support, delivering a firm seating edge and enduring stability while eliminating edge roll-off. The result is a 20% increase in edge-to-edge sleeping surface.

Support designed to last.

12.5 gauge tempered steel delivers the heaviest and strongest support system available in a mattress construction today. Designed for high performance, the 450-coil* construction ensures responsive, underlying support across the entire sleep surface, with zoning in the center third for proper spinal alignment. More spring wire in the 6-turn coils means exceptionally responsive support, while head-to-toe helical lacing virtually eliminates partner sleep disturbance.

*In queen – coil count varies by size.

Heavy-duty, furniture grade foundation.

Pennsylvania Amish kiln-dried wood dowel and beam construction features 3 times the material found in ordinary foundations. This extra-sturdy zoned design is the very same used on waterbeds where extreme pressure and weight factors call for maximum durability. An impressive 18 wood slat construction, additional center rail and increased edge support all add up to superior stabilizing support, durability and extended life.

WE'RE
MAKING
HEAVY DUTY
HAUTE.

Get ready for a sleep experience that's as unexpectedly plush and luxurious as it is tough.

HD PLATINUM

Start with low-profile spring coils individually encased in high-quality, high-density fabric. Add the superior pressure relief of quilted latex combined with 1.8 lb quilting foam. Plus the exceptional durability of high-performance, high-density, multi-layer fabrics. Elegant appointments, including metal corner guards and innovative handle designs, complete the uniquely rugged, refined package.

A solid night's sleep.™
